PENDING CLAIMS

- 1. (previously presented) A system for retrieving financial information from a financial data storage system, comprising:
 - an application interface configured to return requested detail information to an application program by invoking a generalized interface to access detail interface information in a data mart that stores the detail interface information for a plurality of detail interfaces, and to instantiate and invoke a detail interface based on the detail interface information to obtain the requested detail information.
- 2. (previously presented) The system of claim 1 and further comprising the detail interface operable to retrieve the requested detail information from the financial data storage system.
- 3. (original) The system of claim 1 wherein the application interface is configured to retrieve financial data from a financial system or general ledger system using the data mart.
- 4. (original) The system of claim 3 wherein the application program is a reporting program configured to retrieve data to generate financial or account detail reports.
- 5. (original) The system of claim 2 wherein the application interface is configured to retrieve transaction data for an account entry in the application through the detail interface identified by the detail interface information.
- 6. (original) The system of claim 1 wherein the data mart includes a data field to store the detail interface information.
- 7. (original) The system of claim 1 wherein the application interface is configured to receive an activation from a drilldown viewer in the application program.

- 8. (original) The system of claim 1 wherein the detail information comprises detailed transaction data.
- 9. (original) The system of claim 8 wherein the application interface is configured to receive a selected account entry for which to retrieve the detail transaction data.
- 10. (previously presented) A method of displaying financial data stored in one of a plurality of financial data storage systems, comprising:

receiving a detail information request from an application;

invoking a generalized interface to a data mart and retrieving detail interface information from the data mart;

instantiating a detail interface identified by the detail interface information; retrieving the detail information requested from one of the plurality of financial data storage systems through the instantiated detail interface; and returning the detail information to the application.

- 11. (original) The method of claim 10 wherein the financial data storage system comprises a general ledger system and retrieving the detail information comprises retrieving data from the general ledger system.
- 12. (original) The method of claim 10 wherein retrieving the detail information comprises: receiving identity information indicative of the requested detail information from the application.
- 13. (original) The method of claim 12 wherein retrieving the detail information comprises:

 invoking the detail interface using the identity information to retrieve the requested detail information.

- 14. (original) The method of claim 13 wherein the detail identity information comprises selected account information.
- 15. (original) The method of claim 10 wherein receiving a detail information request comprises: receiving an input from a drill-down viewer of an application program.
- 16. (previously presented) A drill-down system used by an application program on a computer readable medium having a drill-down feature activatable to display transaction data from an open business system, comprising:
 - a drill-down interface configured to invoke a generalized interface to a data mart to retrieve detail interface information used to obtain detail information from the open business system.
- 17. (previously presented) The drill-down system of claim 16 wherein the drill-down interface is configured to instantiate a detail interface based on the detail interface information.
- 18. (original) The drill-down system of claim 17 wherein the drill-down interface is configured to invoke the detail interface to retrieve detail information.
- 19. (previously presented)The drill-down system of claim 16 wherein the detail information comprises detailed transaction data supporting a line item in a report displayed by the application program.
